

BAT BOX BUILDING HABITAT

Integrated Bat Boxes. Secure Nesting Opportunities Within A Building Structure

BAT BOXES FOR WILDLIFE FRIENDLY DEVELOPMENTS

Bat boxes provide a practical and effective way to build biodiversity directly into modern homes, commercial developments and community spaces. Integrated bat habitats help create places where people and wildlife can coexist.

Designed to sit discreetly within external walls or building structures, bat boxes create safe roosting spaces without disrupting the appearance, durability or everyday use of the property.

They provide a long-term habitat solution for developments looking to support protected wildlife while maintaining strong architectural design.

With a range of integrated and surface-mounted options available, bat boxes can be incorporated into both new-build and existing properties.

Their discreet design allows them to become a natural part of the building, providing suitable shelter for bats while requiring minimal ongoing maintenance.

By creating secure spaces for bats, integrated bat boxes help bring nature closer to homes and communities while contributing to the protection and recovery of bat populations across the UK.

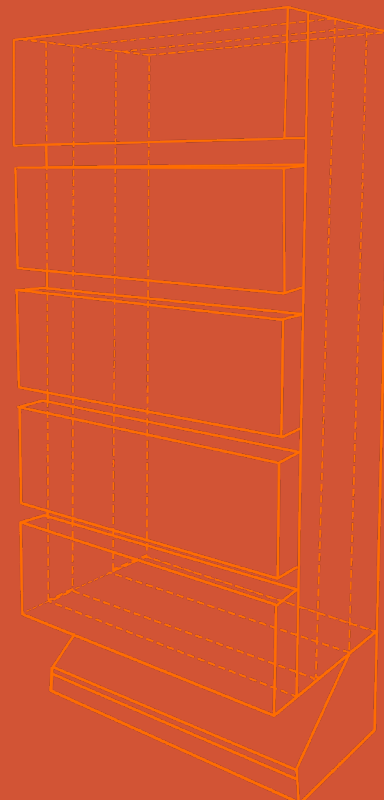

BATBOXES

TECHNICAL SIZES

Our bat boxes are available in a range of sizes to suit different locations and requirements. Whether you need a compact option for a smaller garden or a larger box designed to provide additional roosting space, there is a suitable size available.

CODE	WIDTH	DEPTH	HEIGHT
BBOX-1	215mm	102mm	215mm
BBOX-2	215mm	102mm	290mm
BBOX-3	215mm	102mm	365mm
BBOX-4	215mm	102mm	440mm

Each bat box is carefully designed to provide a secure, sheltered environment while remaining practical and discreet when installed on trees, buildings, or other suitable structures.
