

SWIFT BIRD BOX BUILDING HABITAT

Integrated Swift Boxes. Secure Nesting Opportunities Within A Building Structure

SWIFT BOXES FOR WILDLIFE FRIENDLY DEVELOPMENTS

Swift bricks provide a practical and effective way to build biodiversity directly into modern homes, commercial developments and community spaces. Integrated bird habitats help create places where people and wildlife can thrive alongside one another.

Designed to sit discreetly within external brickwork, swift bricks provide safe, sheltered nesting spaces while blending seamlessly into the building's appearance, durability and architectural design.

Made from durable brick materials, they offer a long-lasting, low-maintenance habitat solution for developments looking to support declining swift populations, encourage biodiversity and create wildlife-friendly spaces within the built environment.

SWIFTBOXES

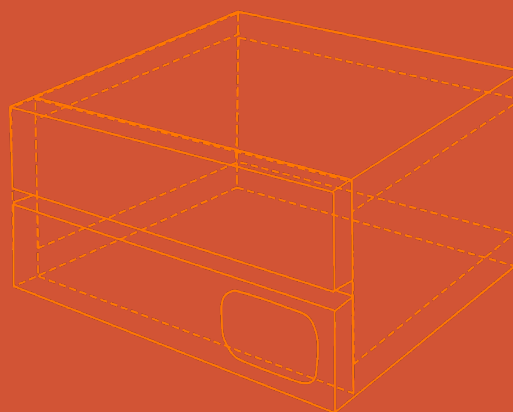

TECHNICAL SIZES

Our swift bricks are available in a range of sizes to suit different building designs and installation requirements. Whether you need a compact option for a residential development or a larger brick designed to provide additional nesting space, there is a suitable size available.

CODE	WIDTH	DEPTH	HEIGHT
SWBOX-1	215mm	200mm	140mm
SWBOX-2	215mm	200mm	215mm

Each swift brick is carefully designed to provide a secure, sheltered nesting environment while integrating seamlessly into external brickwork.

Built for durability and long-term use, they offer a practical and discreet habitat solution without compromising the appearance or structure of the building.
